CREAMLETS!

CREAMLETS*

-new Creamalin® in chewing-gum form

New Creamlets afford convenient, fast relief to pregnant women with heartburn. Mint-flavored, pleasant-tasting, new Creamlets neutralize excess stomach acid and sweeten the breath.

New Creamlets contain specially processed aluminum hydroxide with magnesium hydroxide -- won't cause constipation, fluid retention or an increase in weight. Two Creamlets neutralize the same amount of acid as one new Creamalin antacid tablet.

Two Creamlets should be chewed for about five minutes after meals. They may be taken as often as necessary for gastric distress.

How Supplied: Boxes of 12 Creamlets.

*Creamlets, trademark Creamalin, trademark reg. U. S. Pat. Off.

UTENSIL WASHER-SANITIZER

Protects patients and personnel against cross contamination - - dependably and at less cost.

Prevention of cross contamination from patient utensils is accomplished rapidly, automatically and at reduced cost with the new American Utensil Washer-Sanitizer. The powerful detergent wash, double rinse and steaming cycles are completed in $22\frac{1}{2}$ minutes . . . with no attention from nursing personnel other than loading and unloading. Three sets of utensils are processed in two loads.

The American Utensil Washer-Sanitizer is economical to install and pleasant for nursing personnel to use. It assures uniformly high standards of cleaning and sanitizing by eliminating the possibility of human error . . . and, its modest cost is more than justified by the saving in personnel time alone.

The American Utensil Washer-Sanitizer is available with clean-up counter or as the free-standing unit shown above.

For complete information on this improved utensil technique, write for bulletin SC-321-R.

Exerts a Beneficial Effect on the ARTHRITIC PATIENT

Affords surcease from
minor pains for hours
without gastric upset

An important facet of an analgesia is its *total effect* on the patient¹. Anacin® Tablets exert a *better total effect* in pain relief. Anacin not only affords rapid, prolonged and non-narcotic intervention of pain, but also reduces inflammation . . . alleviates tension, anxiety and leaves the patient more relaxed. The procedure of 'continued therapy' may be followed with Anacin without causing gastric upset. Tolerance is excellent.

RN letters

AA COMPANION-FELLOWSHIPS

DEAR EDITOR: Nurses anxious to help the distraught relatives of alcoholics may wish to refer them to a counseling companion-fellowship of Alcoholics Anonymous called Al-Anon.

A similar fellowship called Alateen provides counseling help for the teen-age children of alcoholics.

Many communities now have Al-Anon and Alateen units that can be contacted through the local office of the AA. Further information is available from Al-Anon Family Group Headquarters. The address: P.O. Box 182, Madison Square Station, New York 10, N.Y.

Mary E. Flynn, R.N.
Chicago, Ill.

L.P.N. SUPERVISOR

DEAR EDITOR: When I reported for duty at a state hospital, I was shocked to learn that I would be working under an L.P.N. supervisor.

In the past, I've defended the L.P.N. because I feel she has a definite place in nursing. But I don't believe *any* L.P.N. is qualified to supervise R.N.s.

Are we going to sit back and

allow ourselves to be replaced by L.P.N.s in the higher positions as well as in bedside nursing?

Patricia Campbell, R.N.
Medway, Mass.

THANKS FROM INDIA

DEAR EDITOR: Since you published my letter in your August, 1959, issue, I've probably become the world's foremost *RN*-collector!

More than fifty of your subscribers have sent me back issues they treasured. I've distributed some 400 copies to nurses here in India. Several of our schools now have complete sets dating back to 1955.

Our thanks to you and to your thoughtful subscribers.

Rev. George Ziebert, S.J.
Catholic Missions
Mokameh, Patna, India

NO PLACE TO EAT

DEAR EDITOR: Many hospitals fail to provide proper eating facilities for nurses who are working on the 11-7 shift.

For example, only one hospital here in Denver has a lunch period when nurses can leave the floor, go to the main dining room, and enjoy a hot meal. At the other hos-

pitals, nurses must accept make-shift facilities.

I'm sure no administrator would work this miserable shift without a chance to get a decent lunch.

Madge J. Luke, R.N.
Denver, Colo.

JOY OF NURSING

DEAR EDITOR: I feel sorry for nurses who don't seem to get any joy from nursing—only from their pay check.

I was graduated in 1913... After I lost my husband in 1952, I came back to part-time nursing. I can't nurse brain- and chest-surgery cases, but there's much I can do. When I leave home at 11 P.M. to work on the night shift, I'm thankful that I'm able to practice my profession and to be of some help to those who need me.

Margaret M. Davis, R.N.
Savannah, Ga.

DIPLOMA VS. DEGREE

DEAR EDITOR: I agree with the RN correspondent who says the three-year diploma program is equivalent to the four-year college course. Hospital schools should be given collegiate status so they can confer a B.S. degree.

Alice Geis Houghton, R.N.
Youngstown, Ohio

DEAR EDITOR: . . . I vote Yes for such a move. I've worked for years with both college and hospital graduates and prefer the hospital-

trained nurse. She has practical know-how as well as theory.

Angela C. Flanigan, R.N.
Yonkers, N.Y.

DEAR EDITOR: . . . True, the three-year graduate takes the same licensure exam as the four-year graduate. But so does the two-year graduate. If the ability to pass this exam were the only criterion for comparing hospital-school and college programs, then the two-year graduate should receive a B.S. degree also.

Eldena Brown, R.N.
Honolulu, Hawaii

DEAR EDITOR: . . . I gained invaluable clinical experience by completing the diploma program. But I'm much better equipped to give total patient-care because I later obtained my B.S.N. Furthermore, I hope colleges will add a year of supervised clinical experience to the present four-year program. Thus we would continue to "grow up" as a profession.

Jessica Leen, R.N.
South Bend, Ind.

KEEP 'EM CLEAN

DEAR EDITOR: Here's a little tip I've found useful: To keep white shoelaces white, paint the eyelet area inside the shoe with clear nail polish. (The polish has to be renewed occasionally, of course.)

May Jacobs, R.N.
Utica, N.Y.

What's she doing that's of medical interest?

She's drinking a glass of pure Florida orange juice. And that's important for several reasons.

How patients obtain their vitamins or any of the other nutrients found in citrus fruits is of great medical interest—because there are so many substitutes and imitations for the real thing.

Actually, there's no better way for this young lady to obtain her vitamin C than by doing just what she is doing, for there's no better source than oranges and grapefruit ripened in the Florida sunshine.

We know that a tall glass of orange juice is just about the best thing a patient can reach for when he or she raids the refrigerator. We also know that if you encourage this refreshing and healthful habit among patients of any age, you'll be helping them to the finest between-meals drink there is.

Nothing has ever matched the quality of Florida citrus—watched over as it is by a State Commission that enforces the world's highest standards for quality in fresh, frozen, canned, or cartoned citrus fruits and juices.

That's why the young lady's activities are of medical interest.

RN

©Florida Citrus Commission, Lakeland, Florida

High-concentration topical salicylate-menthol therapy (BEN-GAY) offers safe, penetrating relief of painful joints and muscles resulting from overexertion.

New, objective evidence:

*A double-blind study*¹ has reaffirmed the exceptional efficacy and safety of conservative, local treatment of chronic rheumatic disorders with BEN-GAY® (BAUME BENGUÉ), a high-concentration salicylate-menthol compound.

The local and systemic effects of BEN-GAY were evaluated by entirely objective methods in 211 subjects of both sexes suffering from various types of chronic arthritis, bursitis, neuralgia, myalgia and lumbago. Changes in range of joint motion were determined by goniometer and by flexion. Topical application of BEN-GAY measurably improved articular function in 94% when physical therapy was also used, and in 61% without adjunctive treatment. Efficient absorption of salicylate through the skin was indicated by an average urinary excretion of 15 mg. in 24 hours. No ill effects were reported or observed.

Benefits of Topical Salicylate in chronic rheumatic disease

Menthol-induced hyperemia plus high local concentration of salicylate has been recently rediscovered as one of the safest and most promptly effective remedies for rheumatoid discomfort due to exposure.

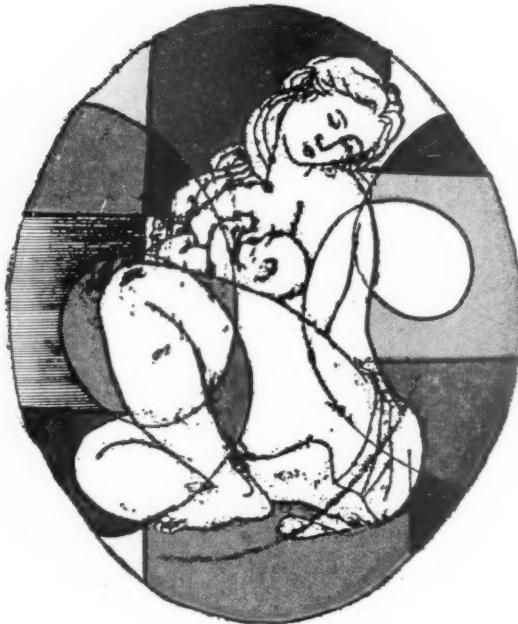

This controlled study offers new evidence of the efficacy and safety of local treatment of chronic rheumatic disease with BEN-GAY, one of the safest and most reliable formulae at the physician's disposal. BEN-GAY is available in two strengths, *Regular* and *Children's*. THOS. LEEMING & CO., INC., 155 East 44th St., New York 17, N.Y.

¹Brusch, C.A., et al.: Md. State Med. J.; 5:36, 1956.

More efficient salicylate penetration of treated area and quicker relief of pain is now made possible by the water-washable GREASELESS-STAINLESS BEN-GAY.

R.N.'s invention said to reduce risk

This Y-shaped tracheostomy tube reportedly simplifies suctioning and minimizes trauma to the trachea. It was invented by Josephine G. Fountain, a staff nurse at the University of Florida Teaching Hospital and Clinics.

When a suction catheter is inserted in the conventional tube, it reduces the tube's effective diameter and tends to pull at trachea

tissue. No catheter is needed with this tube. The nurse attaches suction tubing directly to the longer of the two outlets (shown with removable cap in place). The shorter outlet serves as an airway.

Brain-injured tots learn 'crutchless' walking

Can a child with brain damage learn to walk without the help of crutches or other mechanical aids?

Several staff members of the Rehabilitation Center at Philadelphia thought so. They worked out a program for each of seventy-six children with severe brain injuries. Then they taught the parents how to help each child at home.

¶ First step: The nonwalking child was left on the floor all day and encouraged to creep or crawl.

¶ Second step: When the child reached the stage where his injury prevented further movement, the parents helped him through passively imposed patterns of body movement. (For example, they moved his head, arms, legs exactly as needed to creep or walk.)

The result after two years of home-teaching?

"Sufficiently encouraging to

...news

warrant an expanded study," reports the research team to the A.M.A. All the children showed some progress. Of the more hopeful, "eight were creeping . . . four were holding onto objects. Twelve were ready to walk. And eleven achieved completely independent walking in less than twelve months."

Goal: \$1,000,000 for graduate programs

A fund drive to raise \$1,000,000 has been launched by the newly formed National Fund for Graduate Nursing Education. This sum, expected to be realized during the year, will be used to help thirty institutions that offer masters' degrees in nursing.

Additional financial support, say fund officials, will enable these institutions to enroll more R.N.s and eventually help ease the shortage of nursing educators and administrators. Nearly four times as many nurses with M.A.s are needed, they add, as now graduate yearly.

The fund has the endorsement of the A.N.A., N.L.N., A.M.A., the American Hospital Association, and other groups.

Ice-water therapy called effective for burns

For treatment of a burn involving less than 20 per cent of the body's surface, immerse it promptly in ice

water to which hexachlorophene has been added.

That's the gist of a simple emergency treatment advocated by Dr. Alex. G. Shulman of Los Angeles in a report to the A.M.A. He adds:

¶ If the burn can't be immersed, apply towels soaked in ice water.

¶ Continue the treatment for as long as pain persists (anywhere from thirty minutes to five hours or longer). Meanwhile, add ice as needed to keep the water cold.

Migrating cells may help in ear repair

How does the eardrum keep its surface clean and protect itself from minor surface damage?

Dr. Ward B. Litton of the University of Michigan believes he's found the answer. It's an answer that may help people with ruptured eardrums to hear again.

New cells, he says, originate continuously at the center of the drum and migrate slowly outward, carrying dirt particles with them as they go. They "turn the corner" at the ear canal, move on to the ear-wax zone, then die and flake off.

Because of this action, says Dr. Litton, grafts taken from inside the ear canal might make permanent repair of a ruptured eardrum possible. Skin grafts now used for such repair soon accumulate dead-cell "dandruff" on the surface, causing the patient to lose his hear-

When you see diaper rash recommend Diaparene®

anti-bacterial
ointment
anti-bacterial
rinse

Diaper rash can best be treated by destroying the urea-splitting bacteria in the diaper and on the baby's skin. Diaparene anti-bacterial preparations destroy these bacteria, prevent ammonia formation, and help clear the rash rapidly.

Diaparene Ointment mixes readily with urine to inhibit ammonia-producing bacteria . . . helps prevent further rash development by destroying the bacteria on the skin. Its water-miscible emollient base soothes excoriated areas and promotes healing.

Diaparene Rinse's sustained action inhibits the urea-splitting bacteria for up to fifteen hours

after the diaper has been soiled. With this level of protection, even the night diaper will not cause rash. The mother can rinse the diapers at home with Diaparene Rinse. Or a Diaparene franchised diaper service will supply Diaparene-impregnated diapers.

And for prophylaxis . . . Once the diaper rash is cleared up, help the mother keep baby's skin clear by recommending the Diaparene prophylactic regimen for around-the-clock protection — routine use of Diaparene anti-bacterial Baby Powder and Diaparene anti-bacterial Baby Lotion along with Diaparene Rinse.

HOMEMAKERS PRODUCTS DIVISION • GEORGE A. BREON & CO., NEW YORK 18, N.Y.

... news

ing again. But with an ear-tissue graft, cells would move off the drum before dying.

Study team cites ether as incubator hazard

Why do infants sometimes sneeze and cough when placed in an incubator following surgery?

In some cases, says an Army study team, the infant exhales ether which comes in contact with the incubator's heating unit. This decomposes the ether, producing formaldehyde gas. The gas irritates the baby's respiratory tract.

If the gas is produced in concentrated amounts, the investiga-

tors warn, formaldehyde intoxication may result. In a report to the American Medical Association, they suggest the use of an incubator with a "lower temperature heating unit," plus other measures.

What mental patients say about their nurses

"Who has helped you the most since you came to the hospital?"

Doctors, say nearly half of 215 selected mental patients in the Virginia state hospitals who were asked this question. Attendants, say a fourth.

And what about nurses? Only 6 per cent say nurses helped them

Now . . . Iodine in Safe, Pleasant Gargle Form **STOPS SORE THROAT PAIN FAST**

Millions now get fast, dependable relief from sore throat pain with a revolutionary new type of iodine gargle.

The secret is the discovery of a way to detoxify iodine*—which for the first time can put the full antiseptic power of iodine in a gentle, soothing gargle.

PVP-Iodine, the active ingredient in new Isodine Gargle, coats the throat with a soothing film that relieves raw, painful nerve ends inside throat and mouth where pain starts . . . kills bacteria that cause infection . . . sustains relief for hours.

PVP-Iodine has been effectively used in the treatment of thrush and fungus infections in the mouth¹, and in treating pharyngitis, tonsillitis, stomatitis, and gingivitis. To date, nearly 6,000 patients, ranging in age from premature infants to 90 years, have been successfully treated.²

1. Journal of International College of Surgeons, June 1956.

2. Bulletin American Society of Hospital Pharmacists, May-June 1956. Philadelphia General Hospital, Mt. Sinai Hospital, Philadelphia, and Memorial Hospital, Wilmington, Delaware.

To relieve sore throat pain when you can't gargle, use Isodettes,® the new antibiotic lozenges. Two-way action (1) kills germs, (2) soothes throat, stops pain. Wild Cherry Flavor.

Only Isodine Gargle coats the throat with soothing germ-killing PVP-Iodine. Concentrated Gargle and Mouthwash available at all druggists. Stainless, pleasant tasting.

Now... evidence that a mild soap
can be advised in cases of

ECZEMATOUS HAND DERMATITIS

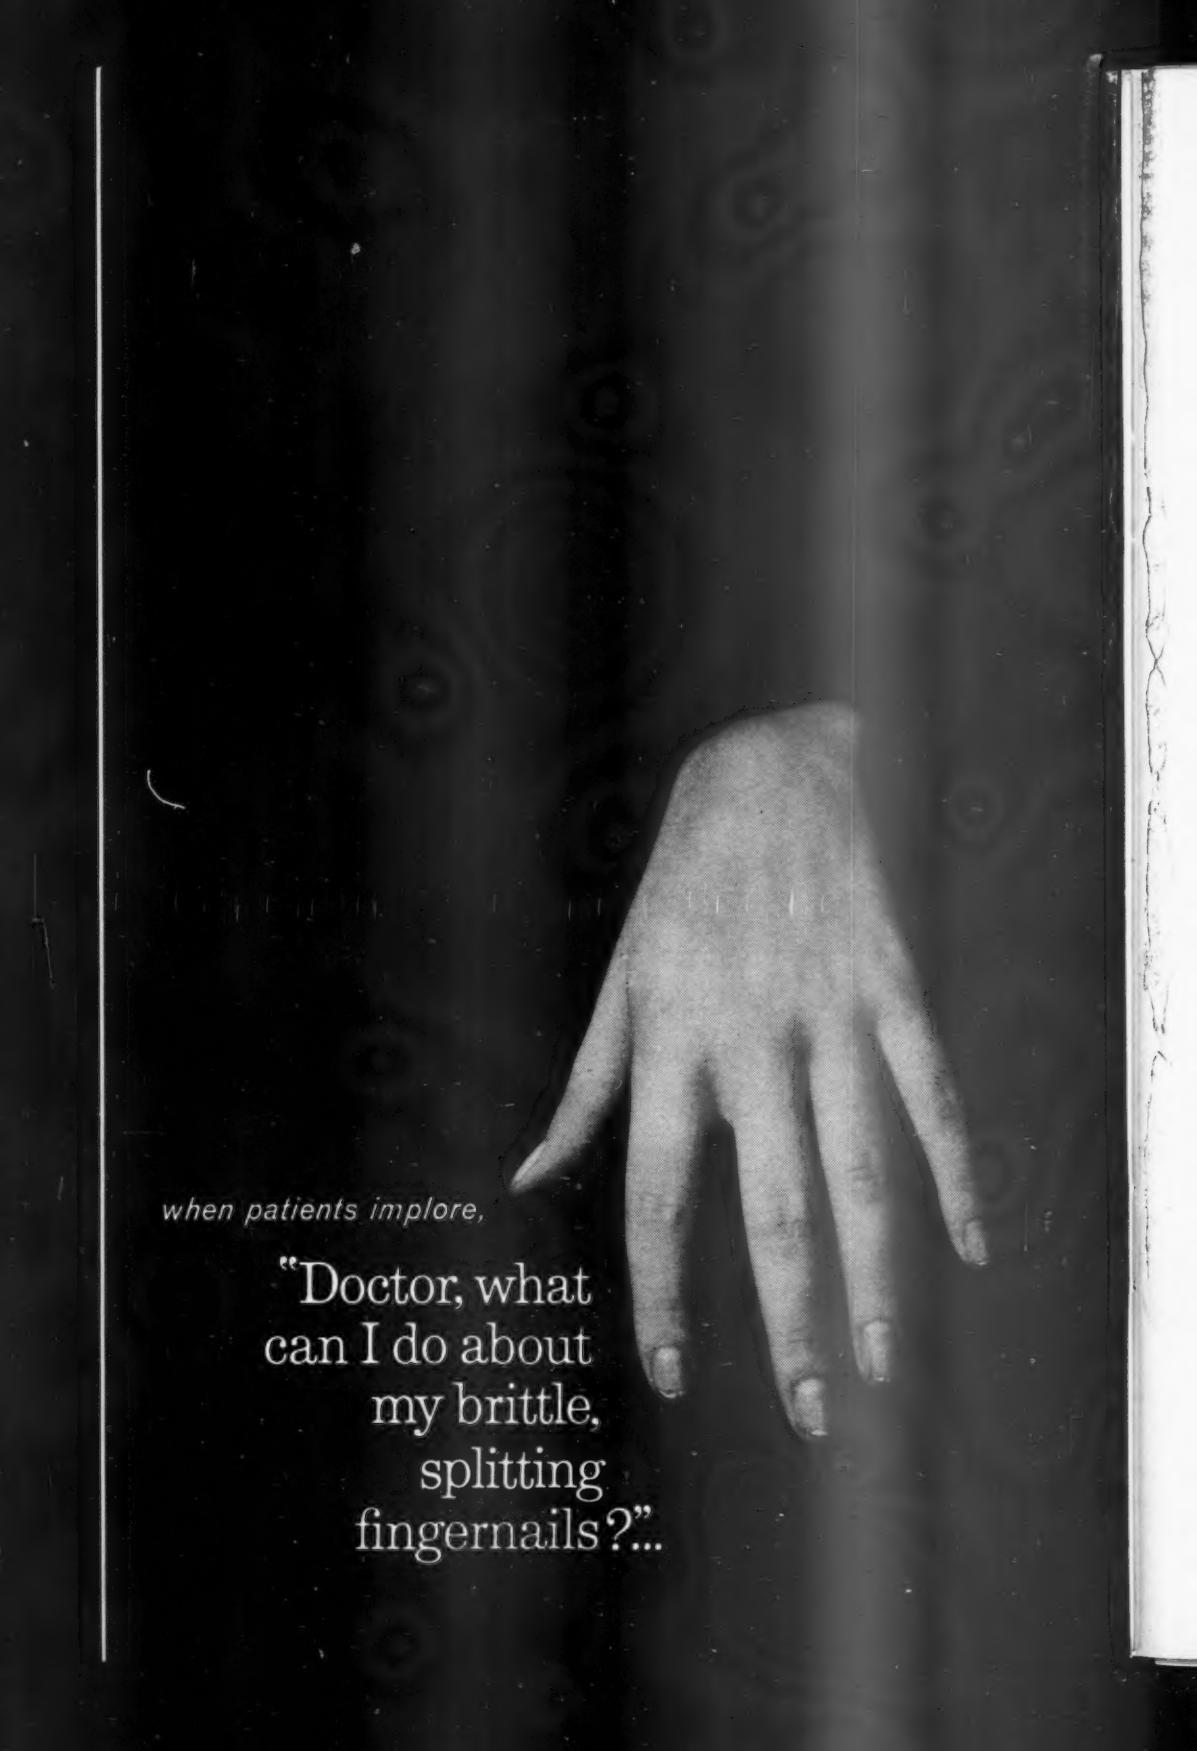

"... the use of soap for routine hand washing and bathing does not influence the course of these eczematous diseases while patients are on a standard therapeutic regimen."

Management of Patients with Eczematous Diseases,
J.A.M.A., 173-11, pp. 1196-1198, (July 16), 1960

The above comes from a report on a recently completed controlled study made on the role of a mild toilet soap in the management of eczematous hand dermatitis and three other eczemas*. Procter & Gamble's Ivory was the soap used in the test. In making this white, pure soap every possible precaution is taken to eliminate ingredients that might disturb normal skin or aggravate eczematous conditions. As a nurse, you'll be interested in knowing that more doctors advise Ivory than any other soap.

the most. Nurses also fare poorly in other categories of the study, made by the hospitals' psychologists and reported to the state medical society. The findings:

¶ Only 6 per cent say nursing care has been the No. 1 factor in their progress; 23 per cent say medication; 20 per cent say nothing has helped.

¶ Only 3 per cent credit nurses with an understanding attitude; 12 per cent credit attendants; 15 per cent, psychologists; 50 per cent, doctors.

A-bombing report shows radiation effects

Findings of the Atomic Bomb Casualty Commission showing the delayed effect of radiation on those who survived the 1945 A-bombings of Hiroshima and Nagasaki are summarized by Dr. J. W. Hollingsworth in the New England Journal of Medicine. Some findings:

¶ Children born to heavily irradiated women pregnant at the time have commonly been small-headed and/or mentally retarded.

¶ Children born to irradiated parents since the bombings have shown normal percentages of still-births, major congenital anomalies, and infant mortality.

¶ Eye afflictions traceable to the bombings are infrequent.

¶ The striking increase in the incidence of leukemia, first noted in

1948, has leveled off since 1952. But the incidence is still much higher among irradiated survivors than generally. The rate of increase is greatest for chronic granulocytic leukemia.

¶ Tumors are twice as common among heavily irradiated survivors as among the general population.

Study shows why families put off seeing doctor

About 60 per cent of all families tend to postpone needed medical and dental care, according to a study made in the Hackensack, N.J., area under the sponsorship of the Health Information Foundation.

These are the reasons for postponement, given by the low- and high-income families that took part:

	\$2,000-\$5,000 income	\$9,000-plus income
Finances	55%	5%
Too busy	2	20
Illness not serious	18	25
Fear	15	20
Other reasons	10	30
	100%	100%

Are hospital charges 'out of line'?

"Do you think that hospital charges are out of line, as compared with physicians' fees?"

The cigarette that made the Filter Famous!

It's true. Kent's enormous rise in popularity—with all the attendant magazine and newspaper stories—really put momentum to the trend toward filter cigarettes!

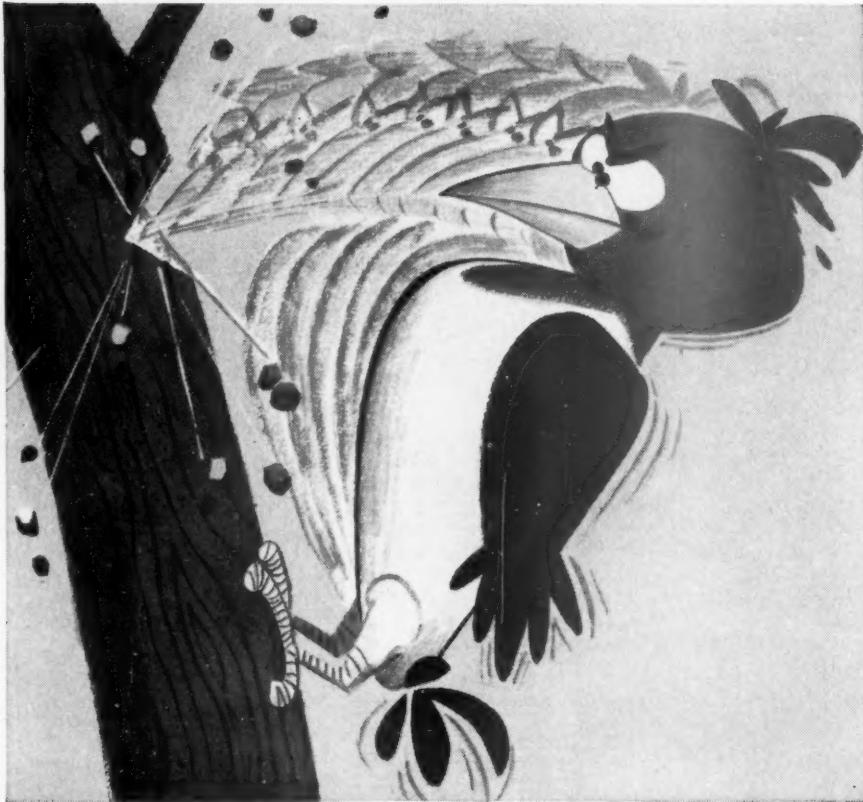

So, Kent is the cigarette that made the filter famous. And no wonder. Kent's famous Micronite filter is made from a pure, all-vegetable material. A specially designed process at the P. Lorillard factory compresses this material into the filter shape and creates an intricate network of tiny channels which refine smoking flavor.

Kent with the Micronite filter refines away harsh flavor . . . refines away hot taste . . . makes the taste of a cigarette mild.

That's why you'll feel better about smoking with the taste of Kent.

**take 2 BUFFERIN® tablets for fast relief
without salicylate stomach upset**

The most common cause of headache is the emotional tension that nurses can get on a hectic day when pressure builds as things go wrong. With BUFFERIN, you can relieve headache and start relaxing tense nerves fast; and BUFFERIN greatly reduces the risk of salicylate stomach irritation.

BUFFERIN contains an exclusive anti-acid combination, DI-ALMINATE, which speeds the absorption of the salicylate, and, at the same time, avoids undesirable salicylate stomach irritation.

For long-term salicylate therapy: In chronic diseases, such as arthritis,¹ BUFFERIN is "... the drug of choice where prolonged high salicylate levels are indicated."²

New medical survey shows what doctors consider most important in a laxative they would use or recommend:

To find out the qualities doctors consider most important in a laxative they would use or recommend, an independent research organization asked doctors across the country for their professional opinions. The survey findings show that doctors want a laxative that is (1) Gentle, (2) Effective, and (3) Close to Natural Acting.

These are the qualities that have made pleasant-tasting Ex-Lax so widely used and recommended over the years — the same qualities that make Ex-Lax so well suited for 1961's professional needs.

bring all of your concepts of cleansing up to date

Many women don't know that a vinegar douche is as old-fashioned as the copper tub, a relic of an empiric age.¹ Acids actually make mucus discharge more tenacious. On the other hand, soaps and harsh alkali are irritating. A detergent douche—TRICHOTINE, the only major douche containing sodium lauryl sulfate—is the modern, more efficient yet gentler vaginal irrigant.

The detergent action of TRICHOTINE

assures greater penetration of viscid mucus, better dispersion of the healing medicaments on the mucosal surface, and more efficient removal of vaginal discharge.

TRICHOTINE is indicated in the management and treatment of cervico-vaginitis and leukorrheas, alone or in conjunction with other antimicrobials. TRICHOTINE is ideal for routine feminine hygiene—safe, gentle and effective.

Don't overpay your income tax!

By Albon P. Man Jr., LL.B.

Every year thousands of Americans overpay—yes, *overpay*—their Federal income tax.

How does this happen? Some overpayments result from mistakes in arithmetic. But the larger overpayments are generally caused by the failure of taxpayers to take all deductions the law allows.

To help you avoid being unknowingly generous with Uncle Sam, I've prepared a list of some important deductions and exclu-

sions allowed R.N.s. Remember that even if you're in the lowest tax bracket, every dollar you lawfully deduct will save you 20 cents. If you're in a higher bracket, you'll save still more.

There's one catch: To itemize your deductions, you need a record of what you took in and paid out last year. Getting your income figures may be easy. But recalling expenses is often a problem. If you paid some of your expenses by check, the check stubs will help. So will canceled bills and receipts.

Now which tax form should you use? Here are the choices:

THE AUTHOR is the executive editor of pension and insurance publications for Prentice-Hall, Inc., and an authority on income tax laws and their interpretation.

... Income tax

1040. If you're in private duty, you *must* use this long form (and Schedule C that's included). On this form you can report any type and amount of income. You may take the standard 10 per cent deduction; or if your deductible expenses add up to more than 10 per cent, you may itemize them and take the full amount.

1040A. This is the short form and the easiest to fill out. You can use it if (1) your income is from salary or wages totaling less than \$10,000 and (2) you have no other income except from interest and/or dividends of less than \$200. You can't itemize your deductions on this form.

1040W. This alternate short form has several advantages over 1040A: You may (1) deduct unreimbursed expenses in connection with your employment, and (2) take advantage of certain credits such as the "dividends received" credit. Also, you may (3) use this form to report wages of \$10,000 or more.

If you're married, you'll probably be ahead by filing a joint return with your husband (or wife, for men nurses), using the appropriate form.

To get the most help from the

list that follows, read it before compiling your record of deductible items for 1960. Then you'll know better what to look for. If you have to file a state income tax return, check it against this list. Though some state deductions differ from Federal deductions, you may find items here that will save you money.

Some deductions for R.N.s

Automobile. You can't deduct the cost of commuting between your home and place of work. But if you use your car for any professional purpose (for instance, on behalf of a private patient), you can deduct your specific expenses or an appropriate portion of your total maintenance expenses.

For example, suppose that you drive 8,000 miles during the year and that this includes 2,000 miles, or 25 per cent, for professional purposes. Add together what you spent during the year for gasoline, oil, repairs, tires, garage rent, insurance, and parking. Add to this the yearly depreciation on your car (you can get this figure from your auto dealer). Multiply the total by 25 per cent (.25 or $\frac{1}{4}$). This is the amount you can deduct.

Bad debts. Includes professional fees you can't collect, but only if you've previously reported them as income (say, on your 1959 return).

Casualty losses. Includes damage to your home or car from Hurricane Donna or another natural disaster in the amount not covered by insurance or similar compensation. Also includes loss from an auto accident or theft in like amount.

Child care. If you're widowed or divorced, deduct up to \$600 paid for the care of your child or children under age 12 or for a handicapped dependent while you were working. This may include payments to a housekeeper, baby sitter, nursery, day or boarding school, or nursing home. If you're married, you generally can't deduct for child

care if the combined adjusted gross income of you and your husband (or wife) is \$5,100 or more.

Contributions. Includes gifts to community funds, churches, tax-exempt schools and hospitals, and nonprofit research foundations. If you did volunteer work for such charities, deduct any out-of-pocket expenses (for travel, special uniform, etc.). Also deduct the value of any used clothing and other items you may have donated.

Conventions. Includes workshops and other professional meetings. Deduct travel expenses, registration fees, cost of hotels, meals, and tips.

Depreciation. Allowed on professional property with a useful life of more than one year—for

Bald angel

The primipara wasn't too far dilated; so it was considered safe to assign a student nurse to prep her.

When I checked the patient, I got the shock of my life. She was having a nearly painless labor. The baby's head was crowning—and the student was calmly shaving it!

I summoned help in a hurry. Said the obstetrician: "I've delivered dozens of babies, but this is the first to arrive with a premature haircut!"

—GEORGIA MCMANNIS, R.N.

Nurses to 99

By Edith S. Oshin

When the United Nations decides to send a mission from its New York headquarters to any area in the world, the group visits the U.N.'s health service before leaving. There one of four staff nurses checks pins on a large world map that show by their colors which infectious diseases are found in each area. She then gives members of the mission any necessary inoculations.

Chief Nurse Jeanette Averill keeps the pins up-to-date by checking the latest epidemiological reports.

"We have problems," she says. "For example, we inoculated several people who were assigned to visit Nauru, a tiny Pacific island. When they returned, they told me they should have had cholera shots. I checked back.

nationalities

A new ruling had reached us just after the mission had left."

Inoculating travelers is only one of many services these four nurses provide for the 3,300 U.N. employees from ninety-nine member nations. Anyone in the U.N. buildings who is ill or injured, including visitors, gets emergency care. The health service averages more than fifty calls daily for first-aid treatments, and about 20,000 visits a year for all causes.

To handle this load there's a staff of thirteen, from eight nations. Included are an administrator, two doctors, two technicians, and four office workers. Nurses are hired from any member nation. At present, three R.N.s are Americans and one is a Filipino. (No vacancies are in view at the moment.)

CHIEF NURSE Jeanette Averill enjoys the U.N. peacocks (above) and the East River view (opposite). More►

MEDICAL HISTORIES of employes arrive from all over the world. Dr. Szeming Sze, director, and Miss Averill review a new record.

A QUICK TRIP ABROAD by an employe may mean a booster shot, prepared by Leticia Abaquin. To the Congo-bound, she gives yellow-fever vaccine.

...U.N. nursing

NURSES MAY LEARN any of five languages in U.N. classes. Miss Averill improves her French by reading the latest copy of *Le Monde*.

VISION TEST is given by Lillian Auger, of French-Canadian descent, to a girl from Kashmir. R.N.s hear the chart read in many accents.

More ►

...U.N. nursing

FIRST-AID CASES account for half the daily calls. This visitor hurt his ankle in the Security Council chamber. A guide (right) summoned Miss Averill. Sometimes enthralled sight-seers walk into glass doors, suffer cuts, bruises.

UPPER RESPIRATORY infections are the most common condition treated. Here Joan Ziegler helps a maintenance worker. U.R.I.s tend to soar during tense meetings.

GUARDS TAKE OVER first-aid duty on week-ends. During weekly check of his first-aid kit, a guard asks Miss Averill about splints. When the General Assembly meets, she hires an extra nurse to cover late hours. R.N.s need not register in New York to work here.

PAPER WORK sometimes keeps Miss Averill after hours. Her monthly tally of conditions treated shows that headaches are few—medically, that is!

END

When your patient can't

This round-up of the latest information on sleep gives some practical pointers on what and what not to do for the patient at odds with Morpheus

By Patricia D. Horgan, R.N.

Tired of hearing that chestnut about the night nurse who wakes the patient to find out if he's asleep? It's about as amusing as a case of fallen arches; and that, in Molly's words, "ain't funny, McGee."

Yet we continue to have patients who toss and turn through long nights; who pace the corridors in the small hours of the morning; and who, in the process, make themselves, their fellow patients, and sometimes the nurse miserable.

The nurse would like to offer such patients some help other than that provided by drugs and

the usual nursing techniques. But what?

Unfortunately, nursing school courses offer little information about the sleep mechanism and the physiologic changes that take place during sleep.

This is understandable. For scientific knowledge about sleep is still sketchy. In fact, if you look for an answer to the simple question of what sleep is, you're likely to find as many theories as there are spots on a leopard.

Some ancient philosophers thought sleep was a period in which the soul wandered free of the body. Others said sleep was

sleep

a kind of transient death. Freud thought sleep was a regression to an earlier and more primitive plane of existence.

Today many researchers view sleep as part of a natural sleep-wakefulness cycle. The individual will get the sleep he needs, they say, unless he consciously interferes with this cycle.

Nathaniel Kleitman, PH.D., of the University of Chicago (probably *the* recognized authority on sleep) says: "Wakefulness is a subcortical, probably hypothalamic, function . . . wakefulness of choice . . . is a cortical function."

Most people today think of wakefulness as man's normal state and of sleep as a resting period. But Eugene D. Robin, M.D.,

of the University of Pittsburgh disagrees. "Sleep," he says, "is the normal state . . . Rather than 'falling asleep,' the individual rouses to wakefulness. The question we should be asking is: 'What causes the waking state?'"

Whatever the answer to that question, researchers *do* know something about the physiologic changes that occur in natural sleep. The research team of J. W. Lovett Doust, M.B., and Robert A. Schneider, M.D., lists the following changes:

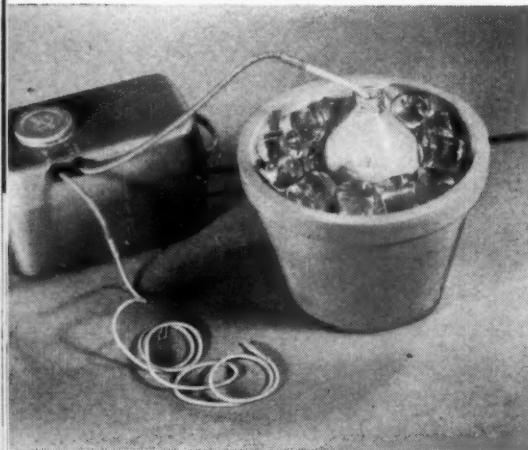

- (1) The systolic pressure drops 10 to 30 mm. of mercury.
- (2) The heartbeat slows to a pulse rate of 60 or less.
- (3) The basal metabolic rate drops 10 to 15 per cent.
- (4) Body tempera-

...Sleep

ture decreases. (5) Breathing slows and becomes intermittent, with costal tendencies. (6) Glandular and urine secretions

diminish. Also, (7) the knee jerk is absent and (8) the Babinski reflex (of the big toe) is positive.

As sleep deepens, say Doust

*A machine that
simplifies
tube-feeding*

Any R.N. who's ever struggled with a leaky, sticky gravity-drip set-up for tube-feeding continuously by nasal gavage will welcome a device called the Barron Pump.* Here are some of its reported advantages:

¶ It lessens the need for special tube-feeding formulas. (Blender-prepared natural foods or strained baby foods can be given.)

*Available from the Oro Manufacturing Co., Inc., Adrian, Mich.

and Schneider, the blood-oxygen level drops. They've found that test subjects make the loudest noises in the deepest planes of

sleep. Such noises, they believe, reveal involuntary efforts to raise blood-oxygen levels.

Is it important for you, as a

¶ It eliminates the need to adjust the flow rate when a patient changes position.

¶ It requires only minimum supervision. The top photo shows the pump ready to be connected to the gavage tube. Note that the short length of latex tubing is attached to a plastic drinking tube. This, in turn, is inserted into the liquid food. (The ice-filled container prevents spoilage during a lengthy feeding.)

In the second photo, the nurse has attached the long latex tube to the gavage tube, and the feeding is in progress. She has also put a top on the insulated container and is checking to see how much food remains.

In this instance, she has set the pump to deliver food at 67 cc. per hour. It will also deliver at 42, 110, and 200 cc. Here's how it works:

Inside the metal case is a pressure roller driven by a small motor. The roller squeezes the section of

tubing that lies within the machine. This action draws food into the tubing and forces it along at a constant rate.

Occasionally the nurse checks to see that the tubing isn't clogged and that it isn't "creeping" into the machine. (Rubber grommets mounted where the tubing enters and leaves the machine are designed to prevent this.) She flushes it through with water whenever cleaning is necessary, and she replaces the tubing after a week of continuous use.

The pump was developed by James Barron, M.D., associate surgeon at Henry Ford Hospital in Detroit, and the Chrysler Corporation's engineering department. Nurses who use it there and in other hospitals say it's a real timesaver. They add that tube-feeding is a much more comfortable and esthetically pleasant experience for their patients when this pump is used.

END

... Sleep

nurse, to know how bodily functions change during sleep? Yes, thinks Dr. Robin. He points out that "normal physiologic changes associated with sleep may have deleterious consequences for the patient with disease."

As an example, he cites the patient with emphysema. This patient is hypoxic and hypercapneic while awake. When he sleeps, these difficulties are intensified. He becomes progressively more hypoxic. So, on awakening, he usually has his period of greatest respiratory distress.

"Some sleeping patients may need more, not less, of the nurse's attention," Dr. Robin points out.

Many night nurses contend that the critically ill patient seems to be worse during the early morning hours and so needs closer observation at that time. (Often, they say, this is when such a patient dies.) There is scientific evidence to support this theory. Doust and Schneider found that "...repeatedly, the period between four and five in the morning was the time at which anoxemia was at its greatest and life at its lowest ebb."

Though the night nurse would

like to spend more time with her critically ill patients, the sleepless patient often prevents this. He rings his call bell steadily. He wants the bed up or down a half inch, or the window closed, or another sleeping pill.

According to the theory of the sleep-wakefulness cycle, this patient is, in reality, trying to stay awake, not trying to sleep. His struggle is caused, say Doust and Schneider, by his "inability to forego interest . . . in personal problems, persistent introspection, or anxiety."

Paul H. Fluck, M.D., in the *Journal of the American Medical Association*, adds: "...the most intractable [nonsleeper] . . . is the insomniac who knows he is an insomniac. He goes to bed with a chip on his shoulder and lies awake half the night because he knows it is useless to close his eyes. The fellow is like the would-be swimmer who never swims because he never tries."

Some investigators say that insomniacs sleep more than they'll admit. A Mellon Institute-sponsored study reports that "...some . . . awaken but little more often than normal people, and remain awake but a little longer . . . they

Continued on page 84

The narcotic analgesics

By Morton J. Rodman, PH.D.

Pain plays a major role in most of man's afflictions. Even moderately severe pain can retard a patient's recovery by robbing him of rest. Prolonged severe pain can endanger his life. So preventing or relieving pain has always been one of the doctor's and nurse's foremost tasks.

Since ancient times opium has been man's most powerful pain-killer. Today morphine and other opium derivatives are still among the most potent analgesics available. They can relieve almost any kind of chronic or acute pain.

What makes the opiates so effective? For one thing, they block most of the pain signals, preventing them from breaking

through into consciousness. More important, they bring about a remarkable change in the patient's attitude toward his pain. Somehow—perhaps by acting on the frontal lobes of the cerebral cortex—they cause him to ignore the pain stimuli that do break through. It's this action, research shows, that keeps the patient largely pain-free.

Morphine and the other opiates have a third attribute: They produce sleep even in the presence of severe pain. This may be lifesaving for the coronary-attack victim. He needs rest, and freedom from anxiety. Morphine helps meet these needs.

But, as the nurse knows, the opiates have drawbacks. Fore-

THE AUTHOR is Professor of Pharmacology at the College of Pharmacy, Rutgers University, Newark, N.J., and a consultant to the U.S. Public Health Service and other agencies.

... Narcotic analgesics

most is their addicting action. This seems to be related to their action on the brain. Whatever the cause, every drug in use today that's potent enough to stop pain when given in small doses is also addicting.

Sometimes pain-relieving doses disturb body functions. They can cause drowsiness, dizziness, disorientation, nausea, vomiting, constipation, and smooth mus-

cle spasm. Worst of all, overdoses may deeply depress the patient's respiration.

Today three developments are reducing these drawbacks: (1) Scientists have turned up several synthetic painkillers claimed relatively free of side effects. (2) They've discovered narcotic antagonists and other agents that help make narcotic medication safer. (3) Doctors have learned

'Nursing is what you make it!'

Bored doing 'industrial first aid'? A slave to beds and baths? This R.N. makes routine a challenge

By Virginia Mello, R.N.

"Just first aid. That's all industrial nursing is. Doesn't it bore you to death? It did me! I'm glad to be out of it and back at the bedside."

So spoke a nursing school friend I'd bumped into on a shopping foray. We were bringing each other up-to-date on our careers.

I suppose that if I were new to industrial nursing, I'd have bristled at her remark. But in thirteen years with industry, I've got used to such comments. So I smiled and said: "It's been a long time since we've seen each other,

Jane. Why don't we have lunch together?"

Later, over coffee, I started in low gear: "The comment you made about industrial nursing interests me."

"I didn't mean it as personal criticism," Jane said. "But honestly: Don't you think industrial nursing is pretty dull?"

"No," I said, emphatically. "Back in my salad days I thought bedside nursing was dull—just an endless round of beds, baths, back rubs, and bedpans. That's what I used to tell my nurse-friends when they kidded me

about industrial nursing. But I don't any more. And I'll tell you why: I've learned that *any* kind of nursing can be made challenging and exciting."

"Even first aid?" Jane asked dryly.

"Even first aid," I said. "The immediate task isn't the determining factor. It's what more you

TAKING A CUE from this Union Carbide (Ashtabula, Ohio) worker's comment about his chapped skin, Industrial Nurse Virginia Mello turns a first-aid procedure into a brief but helpful lesson on skin care.

SEEING A CHANCE to provide "plus" service to a diabetic employe, Miss Mello extends a routine back-to-work check-up into a teaching session on what food substitutions the patient can make in his packed lunch.

can do for the patient *because you are a nurse* that counts."

"I suppose so," Jane said, ready to close the subject.

I continued quickly: "Do you agree that the nurse, because of her education and experience, has a potential for counseling, health teaching, and so on?"

"Of course. But how much of that can any of us really do?"

"More than we usually admit.

Too often, the R.N. in bedside or industrial nursing—in any kind of nursing—forgets two things: her own capacity and the fact that patients are people! She starts thinking of her work as a series of chores—each to be done as quickly as possible. Soon she gets bored. She may even quit nursing."

"You have a point," Jane conceded. "So, what's the answer?"

... What you make it

"Decide that *nursing is what you make it*. Study each patient as a person. Look beyond the immediate situation and take advantage of any opportunities that present themselves."

"Sounds wonderful. But is it practical? Give me one example."

"When you were in industry, I suppose you had a group of 'regulars' who came to the dispensary almost daily for some minor complaint or other?"

"I did, indeed. And what a group that was!"

"Well, one worker I hadn't seen for months suddenly became a 'regular.' Sometimes he'd report a minor accident. But mostly he just complained of an ache here or a pain there.

"He seemed to want to tell me something. One day as we talked, I learned that he had a deaf son. He was at his wit's end trying to figure out a way to help the boy.

"Then I realized that his family problem was probably behind his minor accidents and general complaints. So I asked him when a doctor had last seen his son. He said it had been several years before.

"At my suggestion, we called

the county health nurse. She arranged for an ENT specialist to check the boy. Eventually, the parents were able to enroll him in a special school.

"That worker seldom visits the dispensary now. When he does, it's to show us the latest pictures of his son and to tell us how well he's doing.

"Here's my point: I could have concentrated on the pa-

BEING HELPFUL in personal matters turns each working day into a more interesting experience, says the author. Here she interprets a business letter for a puzzled worker.

Caring for the patient with retinal detachment

By Diane Seide, R.N.

Until thirty-one years ago, when the first retinal operation was performed in Switzerland, retinal detachment meant certain blindness. Today, most patients discharged from reputable eye-surgery centers enjoy either partially or totally restored vision.

RN's editors are aware that ophthalmologists, like most specialists, differ among themselves as to precise procedures and methods of treatment. One eye man, for example, may want his patient completely immobilized after surgery. Another may permit his patient limited motion.

But all ophthalmologists agree that the nurse's care is vital in the patient's recovery. Depending on the extent of the patient's difficulty, the nurse may have to position the patient exactly and/or keep him absolutely quiet. She provides constant emotional support. This often means answering questions about the eye, the condition, and the operation.

Here an RN reporter takes you to New York City's Manhattan Eye, Ear, and Throat Hospital, where the surgeon-director and the operating room supervisor share with you the particular techniques and equipment they favor to help victims who are suffering from retinal detachment.

Contrary to popular belief," said Dr. Donald M. Shafer, "physical strain is not the *basic* cause of retinal detachment. Such detachment usually results from a structural weakness that often runs in families. Many patients with this ailment are myopic. About a third who have detachments in one eye develop them later in the other."

Dr. Shafer is surgeon-director of the Manhattan Eye, Ear, and Throat Hospital in New York City. He has arranged for me to observe some retinal-detachment procedures, along with pre- and post-operative nursing care.

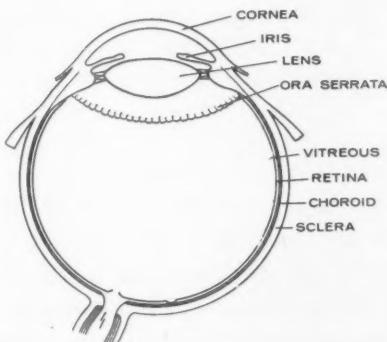

"How can you tell when a detachment occurs?" I ask.

"Each stage has easily recognized symptoms. When the rip, or tear, first appears in the retina [*see eye sketch*], the patient may see a shower of black spots. Then, one day to several weeks later, as the vitreous pulls on the tear, he sees bright spots. Finally, as the retina peels away from the choroid, a black curtain seems to descend.

"Our first task—the one the nurse is vitally concerned with—

is to get the patient's detached retina as flat against the choroid as possible. Unless we can do this, detachment surgery is less hopeful. So before surgery we bring the patient in for a period of supervised bed rest to help the retina settle back or flatten."

To learn more about the pre-

IN RETINAL-DETACHMENT PATIENTS, the retina (the eye's perceptive structure) has pulled away from the underlying choroid which nourishes it. Blindness will result unless the retina can be re-flattened against the choroid.

POST-OP CARE BEGINS with the patient positioned exactly by the doctor. Here, fluid diet is given by Barbara Volpe, R.N.

op care that's needed, I talk with Barbara A. Volpe, O.R. supervisor.

"The patient comes to the hospital two days to a week before surgery," she explains. "His eyes are covered—usually with dark pin-hole glasses at first. These are less frightening than bandages, and they help decrease eye movement. This, in turn, helps flatten the retina. The patient can't see, or can see light only. So we tend to his every need and give him constant emotional support. If the glasses haven't proved effective within

...Retinal detachment

forty-eight hours, bandages are applied."

As we walk through the unit, Miss Volpe points out that the patient is usually on a full diet. For each meal, the nurse tells him exactly what's on his tray and what food she's giving him. Between meals she visits him frequently, so he doesn't feel cut off from his surroundings. She may read to him or turn on the radio. She encourages him to "talk out" any fears he may have.

If he has bathroom privileges, she helps him to the bathroom, making sure he doesn't jar himself. She gives him pre-op medications as ordered—explaining each time what she's doing. Finally, she wheels him to surgery, where a specially trained scrub nurse takes over.

Leaving Miss Volpe, I next observe an operation in which diathermy is used to repair a detached retina.

The patient lying before me is completely draped except for his left eye and arm. Inflammable anesthetics can't be administered, so the anesthesiologist gives nitrous oxide by intubation, with I.V. Anectine (a muscle relaxant). Just before the operation, I.V. Pentothal is added.

After opening the conjunctival layer, the surgeon cuts the eye muscles free and turns the eye, so he can work on the back of it. Then he checks a retinal chart posted on the wall to make sure he has spotted the exact location of the retinal tears.

A nurse turns on the diathermy machine. An assistant holds the eye steady between lengths of suture. He picks up the diathermy electrode. The surgeon guides him to the exact spot on the exposed sclera with a specially designed instrument, the indirect ophthalmoscope. The assistant presses the tip of the electrode gently against the sclera. A small burn appears on the eye. This causes coagulation in the retina, sealing off the detachment.

A few minutes later I stand in another room. Before me is a patient without drapes. This time a nurse pushes a gleaming, humming machine close to the table. It's about the size and height of a refrigerator. A long, black, telescopic arm extends over the patient.

This is the Light Coagulator, a German-designed machine that has been used in the U.S. for about a year. It produces a tiny beam of light that's three to six

TO REDUCE EMOTIONAL TRAUMA, the patient's good eye may be exposed on the doctor's orders. Here the nurse starts the procedure.

times as bright as the strongest sunlight.

The operation is called light coagulation. It's used without surgery to (1) burn out a malignant tumor or (2) seal off small retinal tears before detachment occurs. Used with surgery, it helps seal tears and prevent later detachment.

This new technique makes use of the principle that light produces heat when absorbed. The surgeon directs the powerful beam on the tumor or the retinal tear. When concentrated on a tear, the light is absorbed by the

PIN-HOLE GLASSES are a welcome change to the patient, who is now able to sit up briefly. The nurse arranges the pillow for support.

pigmented choroid that lies *below* the retina. The resulting heat causes coagulation in the retina.

After the operation is completed, I ask Dr. Shafer if any techniques other than diathermy and light coagulation are used for repairing detachments.

"In many cases," he replies, "a scleral resection may be necessary. For instance, suppose the retina has been detached for some time and has become fixed—that is, has folded in upon itself. Then we remove a piece of the sclera on one side of the fold and sew the edges together. We

...Retinal detachment

may even enclose a piece of silicone rubber. This shortens the eye and helps bring the retina against the choroid so that diathermy may be used.

"For more complicated cases, we may do an encircling buckle. In this procedure, we encircle the eyeball with a piece of thin polyethylene tubing and suture it in place. This pushes the outer wall of the eye inward, holding the retina and choroid together.

"If there's a large-volume detachment—and often if other methods fail—we may try a vitreous implant. We inject human donor vitreous into the afflicted eye to build up the pressure. This may force the retina and choroid together from the inside."

I thank Dr. Shafer and again join Miss Volpe to continue our tour of the unit. As we move along, she explains the post-op care. The following are the major points she stresses:

► Correct positioning and safeguards.

The doctor orders a certain position for the post-op patient according to the location of the retinal detachment. For example, with a temporal detachment of the right eye, the patient lies on his right side; for an upper de-

tachment of either eye, he lies flat, with feet and legs slightly elevated.

The patient is encouraged to move his extremities to prevent venous thromboses. The nurse explains he must not shift the position of his head under any circumstances. Otherwise a redetachment may occur. She visits him often to help reduce the psychologic trauma that his imprisonment in darkness may induce.

Sometimes (though rarely) a patient may become so upset that he tries to tear off the bandages. Then the nurse removes the bandage from the good eye and calls the doctor, who may order sedation.

Usually, visitors are limited. For they may excite the patient and cause him to move. The nurse enforces this rule strictly. She also tries to keep the room free from disturbing noises.

► The patient's diet.

The patient starts on a liquid diet. Solid foods are added gradually. The nurse makes sure the patient doesn't get fruits with pits or seeds in them, or fish (because of the bones).

► Ambulation and discharge.

After the retina is flat and healing has started, the patient

STEADYING THE PATIENT in her first cautious movements, the nurse helps her into position for a few minutes of leg-dangling.

usually is allowed progressive movement, beginning with leg-dangling. Once the dressings are permanently removed, he again wears pin-hole glasses to minimize eyeball movement.

The nurse warns him not to (1) touch his eyes, (2) jar himself, (3) bend over, or (4) lift heavy objects from any position.

If the doctor wishes, she repeats the doctor's instructions to the patient and to members of his family so they'll know exactly what to do. She secures the proper eye drops and tells the patient how to use them. She stresses

...Retinal detachment

that he should return to the doctor, or to the clinic, for regular post-op check-ups. She emphasizes that the doctor has done his

best to repair the patient's eye, or eyes. Now it's up to the patient to cooperate so that he may soon resume a normal life. END

NURSING

Tip

How to make a supply of non-lumpy ice bags

Cellophane bags, now available commercially, can be used to make icebags that aren't lumpy, don't leak, and never need refilling. Here's how the bags are readied for freezing, as described by Major Robert T. Reese, dental surgeon at the Hickham Air Force Base in Hawaii:

- ¶ Prepare a 10 per cent salt solution.
- ¶ Holding each bag upright as shown, pour in enough solution to fill the bag one-fourth full.
- ¶ Seal the top by heating and pressing the edges firmly together.

You can stack several bags in the refrigerator, says Major Reese, and they won't stick together. They're ready for use in an hour. When you take one out, wrap paper napkins or facial tissues around it to absorb surface moisture.

The bags stay frozen for twenty minutes of use. They can be cold-sterilized and refrigerated over and over. END

'Nursing is what you make it!'

Continued from page 55

tient's immediate complaints. Instead, I looked beyond them. Compare the satisfaction I had helping this man solve his family problem with the satisfaction I'd have had from bandaging cuts or dispensing aspirins day after day!"

"I see your point," Jane conceded. "But you've used an unusual case. What about all the patients with routine injuries and illnesses that you care for day in, day out? Don't tell me you find *every one* of them a challenge?"

"Not every one. But many. For instance: The other day a foreman brought in an injured worker whose face and shirt front were covered with blood. Both men were badly shaken. It turned out the injury was a minor scalp wound, caused by a splinter of metal.

"The two men were amazed that such a small cut could bleed so freely. So, while I cleaned the wound and applied a dressing, I explained how the scalp is well supplied with blood vessels and

thus bleeds profusely, even from a tiny laceration. I showed them how, by applying pressure over the bleeding site, you can control the blood flow.

"My point again: I looked beyond the patient's immediate need. I could have cared for the injury, made a cryptic remark about keeping the dressing clean, then sent the men away with the impression that I was frightfully efficient. Instead, I did some health teaching. And I'm hopeful that what I taught will help those two workers handle their families' first-aid needs more effectively."

"Your point is beginning to come through," Jane said with a grin.

I went on: "Many a nurse seems to lose the pride she once had in being an R.N. She forgets she's in a profession others look up to. She forgets that often the patient expects *her*—simply because she's a *nurse*—to work some kind of magic that will help him out of the situation he's in."

Jane looked skeptical again.

"It's true," I said. "For example: One of our workers kept coming in to have dirt removed from his eyes. Now I knew he had goggles and was supposed to

New Approach in Topical Therapy for Acne Pimples

Cutitone

Made and fully guaranteed by CUTICURA
world's best known name in skin care

Recent clinical observations support the view that an interplay between the secretions of the sweat glands and the sebaceous glands is important in acne, and many formulations having astringent properties have been recommended.

CUTITONE goes beyond present astringent formulations and for the first time unites the well-known sulfur-resorcinol combination with Alchloral,^{*} an effective astringent and healing agent. In addition, Bithionol, U.S.P. imparts an antibacterial action which inhibits secondary infections and the formation of inflamed pimples. This clinically superior combination of active ingredients has also been given proven cosmetic and esthetic appeal.

Special silicone covering aids and cosmetic grade pigments together pro-

vide an effective concealing action. Pleasantly scented CUTITONE goes on more smoothly, spreads and rinses off more readily, and blends more easily into the natural skin tone.

Proved in Clinical Tests

In controlled clinical tests involving nearly 300 patients with acne, 8 leading skin specialists report outstanding results—and unanimously approve the superior clinical effectiveness of CUTITONE. Also, comparative "use" tests with leading competitive products reveal a 91% patient preference for this new, modern, more comprehensive acne preparation.

*Alchloral is Cuticura's own name for
Aluminum Chlorhydroxy Allantoinate

... What you make it

wear them. So I asked about this.

"His goggles didn't fit, he said. They kept slipping down his nose. Why didn't he ask the safety office for a different pair? Well, a man just doesn't do that . . . His voice implied that a nurse could, if she wanted to. So I took him to the safety office and got a pair that stayed put. *That* ended his trouble—and possibly saved him from a serious accident to his eyes.

"Another example: Some of our workers are recent immigrants. They can't read English. So, once in a while a man will

bring me a letter in English to read to him. He does this, I'm convinced, because of two facts: (1) I'm a nurse. In his mind, a nurse is a person who helps people. (2) He met me at the time he took his employment physical. He senses that I'm interested in him as an individual, whether he's well or sick."

Now Jane took the offensive. "But you have an advantage over the hospital nurse. Your patients are with you for as long as they're employed. The hospital nurse faces a different situation. Her patients come and go so fast she

The medicated skin treatment preferred by nurses in over 4000 hospitals

MEDICATED
dermassage®

In hospitals all over America, thousands of nurses like yourself use Dermassage routinely on their patients for all-over skin care. They know that this creamy-white emollient body rub helps significantly in preventing bed sores, sheet burn and irritating dry skin itch—helps keep the patient's skin soft, cool and comfortable.

And they've discovered, too, that what's good for the patient, is good for themselves. Nurses particularly enjoy a Dermassage "after-duty" massage for tired, burning feet; for sore, aching muscles, and for use after the bath. Try Dermassage for your own all-over skin care!

Dermassage... America's foremost non-alcoholic medicated skin treatment

Tidal Irrigation at its Best and Simplest

The Gomco Tidal Irrigator performs full cycles of irrigation and drainage automatically. The doctor simply sets the unit at the level of the patient's symphysis pubis then adjusts the rate of flow of the irrigating fluid to the bladder emptying pressure. The nurse needs only to fill the irrigating reservoir and empty the one-gallon receptacle. The unit does the rest. Here is equipment so dependably helpful that it is taken for granted in hospital after hospital.

Have your dealer show you the complete GOMCO line of suction, drainage and suction-ether units — your assurance of the best, for consistently good results.

How Dial can help curb the in hospitals

The antibacterial ingredient in Dial—a synergistic combination of hexachlorophene and trichlorocarbanilide—has long been known for its effectiveness against the skin bacteria that cause perspiration odor.

Now new and more extensive tests have established that Dial inhibits the growth of a wider range of gram-positive and gram-negative bacteria than any other leading toilet soap—including strains that are resistant to antibiotics.

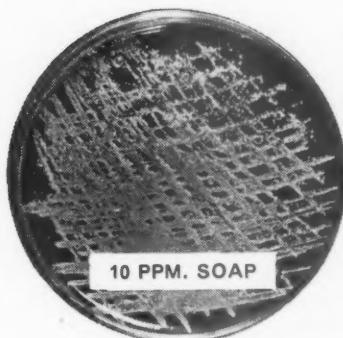

Many physicians already recommend the use of Dial to their patients. Now this new evidence points up even more sharply the benefits of Dial for hospitalized patients and hospital personnel.

Dial is available in guest sizes for hospitals. Ask your hospital purchasing agent to write our laboratory at the address below for information and free samples.

... What you make it

usually doesn't have a chance to know them well. She can't avoid being caught up in the impersonal admission-discharge routine."

"That depends on the nurse," I said. "For instance: Suppose she's teaching a diabetic patient how to give himself Insulin. Maybe she sees him only once or twice.

"If she's 'all business,' she simply teaches him the Insulin-injection technique—which is all right as far as it goes. But if she's the kind of nurse I'm talking about, she looks for other ways to help him.

"Suppose she draws him into conversation and learns about his job. She sees at once that it will be hazardous for him, because he's a diabetic. He may easily be cut or burned. So she passes on this information to, say, the medical social worker. By this action she may help save the patient from future grief. She

gets a glow of satisfaction from the 'plus service' she has given.

"Why, I'll bet there's a way to make even the bed-bath ritual more interesting, if the nurse puts her mind to it!"

Jane was nodding in agreement. Suddenly I realized that the coffee shop was nearly empty. I glanced at my watch. I was going to miss that sale I'd come to town for unless I hurried right off.

Jane and I parted with the usual promise to get together again soon. I guess I made a convert that day. For at Christmas came a brief note, scribbled on the back of her card:

"Got a terrific offer to go back to my old plant. And, thanks to you, I nearly jumped at it. But I'm having such a ball putting over some of the ideas we discussed that I couldn't bear to leave the hospital. Not just yet, anyway. Fondly, Jane." END

"Yes," said 81 per cent of a sample of doctors polled recently by *GP* magazine. "No," said all administrators polled by *Southern Hospitals* magazine.

Many M.D.s felt that hospitals could reduce a number of above-cost or overlapping charges. For instance, one doctor objected to a hospital's charge of 15 cents per aspirin. Another suggested: "The patient who pays for I.V. feedings shouldn't have to pay for meals."

The administrators pointed out that most hospitals operate at cost or at a loss. They readily admitted that some items and services are billed at above cost. But, they added, this is done to pay for nursing and other unbilled services.

**WHAT'S
NEW IN**

Drugs

Claims made here for new drug products are claims made by the manufacturers of those products and are reported by the writer of this column as a service to readers. RN itself makes no claims.

Diarrhea-control tablet: A new product called *Lomotil* has been safer and more potent than paregoric for treating diarrhea. It contains diphenoxylate, a chemical that's relatively free of such opiate-type side effects as drowsiness, dizziness, and vomiting. It has been used to control or lessen bowel movement in gastroenteritis, food-poisoning, ulcerative colitis, the malabsorption syndrome, and other conditions.

Diphenoxylate hasn't caused addiction in humans. But it has shown some addicting signs when given to animals. Because of this and because of its chemical similarity to meperidine (Demerol et al.), it must be handled as a narcotic.

Potent malaria-fighter: Two anti-malarial agents combined in a product called *Camoquin* destroy

The highly effective wide-spectrum local antibiotic neomycin is combined in new Neopan Cream with soothing, healing pantothenylol (as available in Panthoderm Cream).

Virtually free from sensitization or irritation...this esthetic, water-miscible cream relieves pain, itching and irritation and speeds tissue repair as it prevents or controls infection* in...

pyogenic dermatoses

secondary cutaneous infections

infected wounds, burns, external ulcers

furunculosis • impetigo

folliculitis • herpes simplex

Each gram of NEOPAN contains:

NEOMYCIN SULFATE . . . 5 mg. (0.5%)
(equivalent to 3.5 mg. neomycin base)

PANTOTHENYLOL . . . 20 mg. (2%)
in water-miscible cream base

supplied: 2 oz. and 1 lb. jars.

*systemic anti-infective agents should also be used where necessary.

...What's new in drugs

all stages of the malaria parasite. So say doctors who've tested the combination on thousands of patients in India, Africa, and Latin America.

One of the agents, amodiaquin, wipes out the stage of the organism that invades the red blood cells. This promptly stops an acute attack and suppresses any further reproduction of the parasite in the blood corpuscles.

The other component, primaquine, eliminates malaria cells that invade the liver and other body tissues. This prevents later relapses.

Primaquine also kills carrier cells circulating in the blood, thus cutting the link of transmission between man and mosquito.

Injectable urea diuretic: A new sterile urea powder suitable for injection is called *Ureaphil*. Reports say it often produces dramatic effects.

When dripped slowly into a patient's veins, the drug causes a prompt diuresis. This reduces in-

tracranial pressure in cerebral edema resulting from injury, tumors, or other disease processes.

Other reported advantages: It often (1) starts urine flow halted by burns, or surgery, or trauma and (2) does away with the need for bladder irrigation after prostate surgery.

For peritoneal dialysis: A balanced solution of electrolytes and dextrose called *Inpersol* is being used for irrigating the peritoneal cavity in a new procedure for treating acute kidney failure.

In this technique—called peritoneal dialysis—the patient's own peritoneal membrane serves as a temporary kidney. Waste materials pass out of the blood through the thin living membrane into the irrigating fluid, which is then drained off.

Inpersol solution can also be used to speed the removal of barbiturates, salicylates, and other dialyzable poisons from the system.

instance, the leather equipment bag you may use when doing private duty. To figure depreciation, assign a reasonable life expectancy to the property and then divide the cost by this figure. Example: Your bag costs \$25 and you expect it to last five years. So you report a deduction of \$5 each year for five years.

Dues. For membership in professional organizations and in clubs (for instance, a local health group) through which you keep up professional contacts.

Educational expenses. Not deductible if your purpose is to learn a new specialty or to qualify for a new job. Deductible if required to keep your present job, or maintain your present salary level, or improve the skills needed in your present job. Deduct tuition and lab fees, cost of required travel, meals, and lodging.

Employment expenses. Deduct sums paid for position-wanted ads, to nurses' registries, and to employment agencies.

Equipment and books (professional). If their useful life is one year or less, deduct the full cost. If more than a year, deduct the depreciation.

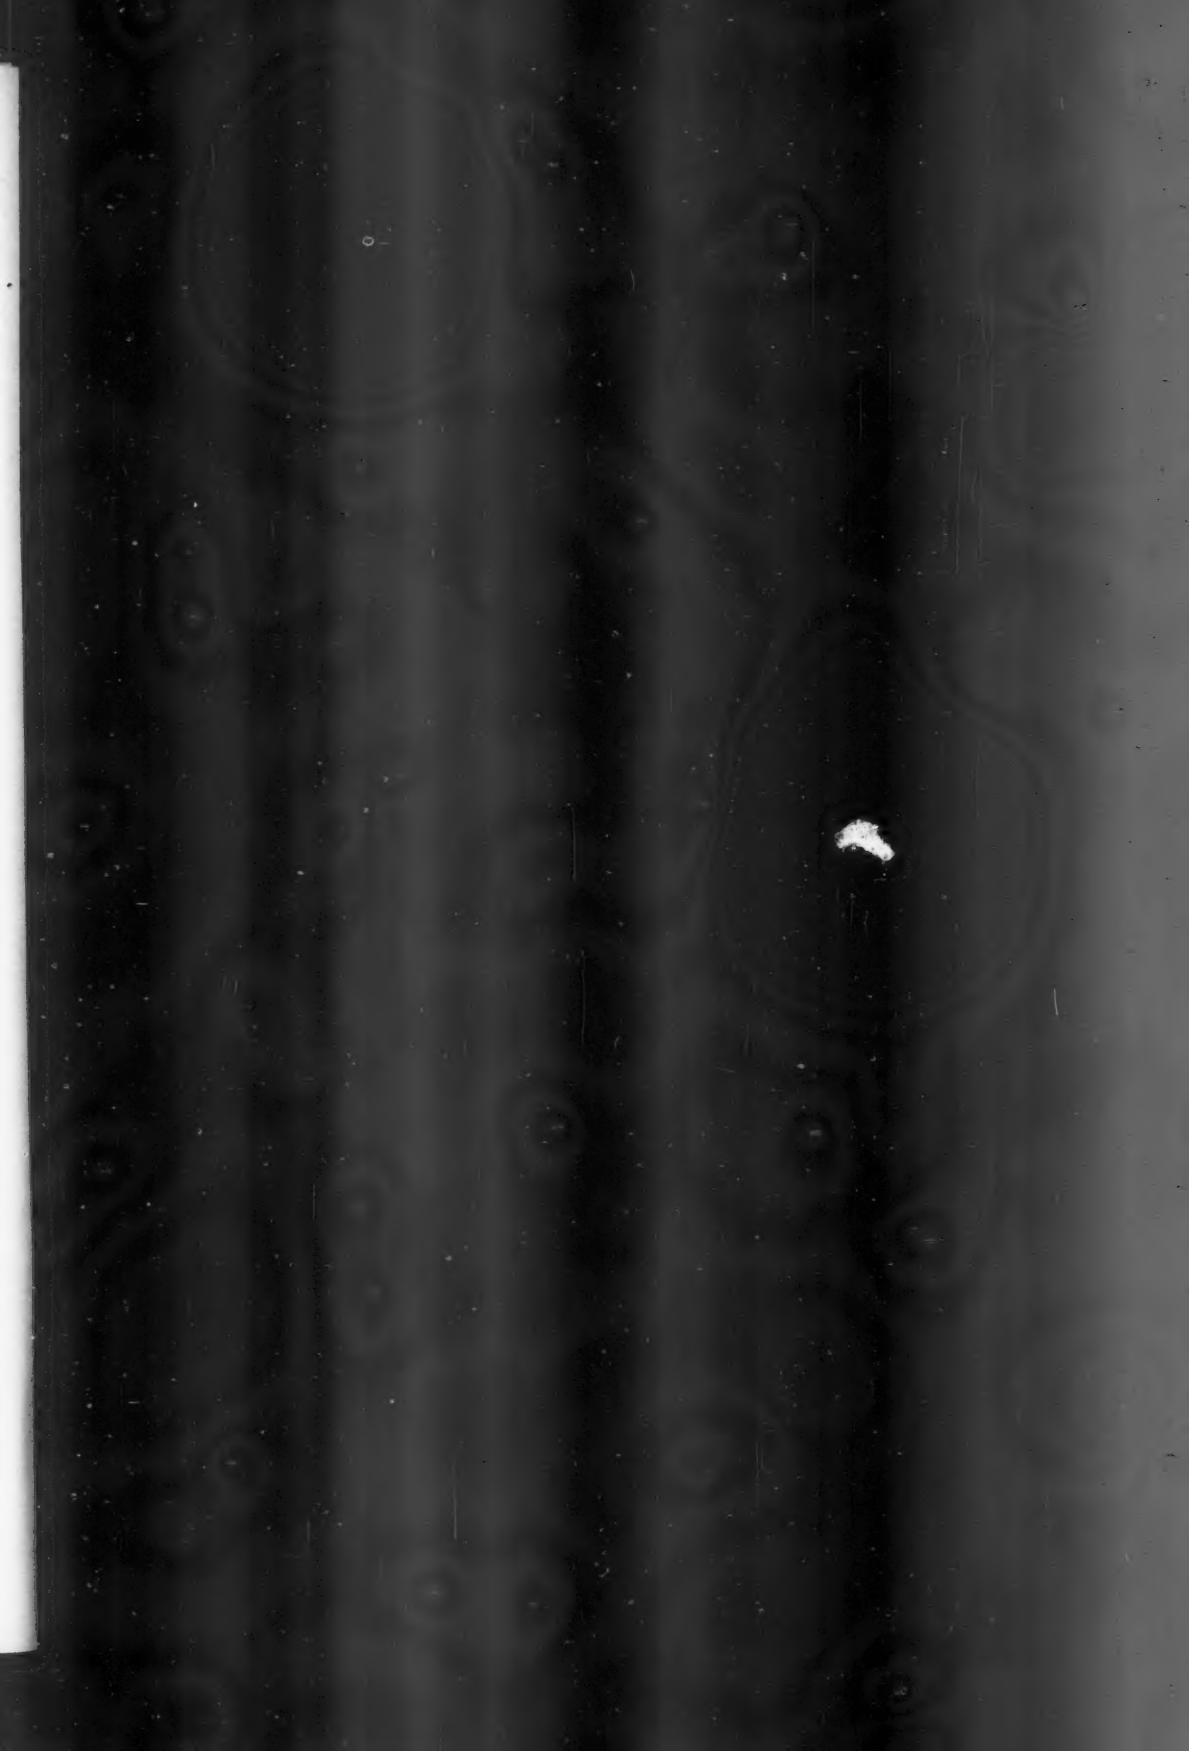

Insurance. Deduct the premiums for malpractice insurance. If you use your car professionally, deduct the proper proportion of your car insurance premiums.

Interest. Don't forget to deduct the interest portion of installment payments, including those for your car.

Medical and dental expenses. (1) Add together amounts paid to doctors, dentists, nurses, optometrists, and hospitals, to the extent not reimbursed by insurance; cost of premiums for health and hospitalization insurance, eyeglasses, dentures, hearing aids, transportation to and from medical care.

(2) Add together the amounts spent for medicines. Subtract from this figure 1 per cent of your adjusted gross income.

(3) Add together (1) and (2). If you're under age 65, subtract 3 per cent of your adjusted gross income from this total. The remainder is deductible up to \$10,000, depending on your family status and type of return. If you're over 65, you may de-

when feminine hygiene is mentioned

Massengill® Powder

the buffered acid vaginal douche
with low surface tension

Women all over the country prefer Massengill Powder—the douche that assures daintiness.

- Pleasant to use . . . clean, refreshing odor; non-staining
- Effective penetration of folds in vaginal mucosa because of low surface tension
- Mildly astringent . . . soothing to inflamed tissue
- Buffered to maintain normal, low vaginal pH
- Valuable adjunct in management of common vaginal infections

THE S. E. MASSENGILL COMPANY
BRISTOL, TENNESSEE

... Income tax

duct all medical expenses within specified limits.

Subscriptions. To professional journals.

Taxes. Don't forget state sales, gasoline, and cigarette taxes; car licenses; state nursing license; state income and personal property taxes; real estate taxes. Ordinarily you can't deduct Federal taxes. But if Federal excise taxes are included in the price of something that's a proper professional expense (for instance, train or bus fare), you may deduct them.

Telephone. Deduct the full cost of calls for professional purposes, or a proper proportion of the total cost of your home phone.

Uniform. Deduct the full cost and maintenance, including caps, stockings, shoes, and capes, if the items aren't adaptable to general wear to take the place of other clothing. (For instance, you can't deduct the cost of flesh-colored nylons.)

Some exclusions for R.N.s

Dividends. Omit the first \$50 of dividends from your return. Report any amount above the \$50. You may take a further credit in this way: Multiply the amount reported by 4 per cent

(.04), then subtract the resulting sum from your *total tax*.

Meals and/or lodging. If included as part of your income, omit either or both from your report, as illustrated:

1. Suppose your salary is \$4,200. You're required to eat your lunch at the hospital cafeteria, and \$200 is withheld yearly to pay for this meal. You report your income as \$4,000.

2. Suppose you're required to live in the nurses' residence. Your salary is \$3,600 plus room and board. You report the \$3,600 only.

Scholarships. Omit when awarded for study at a recognized educational institution (for instance, a college). Also omit any Public Health Service award for advanced training. If you're a student nurse and your scholarship includes room and board at an accredited nursing school, omit the value of these services as well as any cash you may receive.

Sick pay. If you're absent from work because of illness at home, you must pay taxes only on the amount you receive during the first seven days. If you're injured, or if you're hospitalized, the first seven days' income is

tax-free. You exclude your sick pay up to a total of \$100 weekly if your employer pays this to you or has paid for the insurance which pays it. There's no limit if your sick pay comes from insurance you've paid for yourself.

Social Security. You may omit all payments whether received in your own right, or as a dependent, or as a survivor. You may also omit all payments received from unemployment insurance.

END

legal pointer

QUESTION: *Practical nurses (and sometimes nurses' aides) often do certain nursing procedures—for instance, take a patient's temperature. Is it legally acceptable for them to write the nurses' notes for these procedures and then sign the notes?*

ANSWER: The most commonly recognized definition of duties for licensed practical nurses states that they may carry out simple nursing procedures in the care of the subacute and convalescent patient. Further, it is generally accepted that properly trained practical nurses (including some called aides) may carry out more advanced nursing procedures under the supervision of R.N.s and at the direction of physicians. Hence, they may also record such procedures in the nurses' notes. Many hospitals require a countersignature by the charge nurse or supervisor who is responsible for their work. From a legal viewpoint, this safeguard is recommended.

DO YOU HAVE A QUESTION about some legal aspect of nursing? If so, send it to William A. Regan, LL.B., care of RN. He'll select questions for reply on the basis of their general interest to readers. No questions can be acknowledged or returned.

When your patient can't sleep

Continued from page 48

pay enough attention at the time to the facts and conditions of their awakening to recall them the next day, whereas the healthy minded person does not."

Other investigators think that we sleep "on guard." A primitive fear of the dark and of the unknown, they say, keeps us subconsciously alert and ready to defend ourselves. For some, this vigilance interferes with sleep.

In support of this, they point out that a child who fights sleep usually drops off peacefully if a parent lies down beside him, or rests a hand on him, or allows the child to keep a favorite toy in the bed. Such contact, they say, helps dispel the child's fear.

There you have several prevalent theories of what sleep is and what causes sleeplessness. Now, what can you do to help the sleepless patient? Here are some ideas:

¶ Try to find out if there's something troubling him. Your willing ear may relieve his anxiety enough to encourage sleep.

¶ Try some of the time-tested procedures that are thought to aid sleep—giving warm milk, for example. This is said to draw blood to the stomach, producing a slight brain ischemia that helps depress the hypothalamic center.

¶ Try gentle massage of the patient's back or forehead. Or sit with him, resting a hand on his arm or on the bed. (This is believed to fill the need for bodily contact.)

¶ Check the environment for disturbing conditions (e.g., noise, light, poor ventilation, tight sleeping garments, and too many bedclothes).

If the foregoing do not work, try this: Have the patient assume a comfortable position, preferably stretched out. (This seems to promote muscle relaxation.) One writer suggests "trying to make oneself as long as the bed." Another recommends lying on the left side in a stretched-out position like that assumed by a sleeping animal.

Once the patient is comfortably positioned, tell him to imagine that the muscles in his legs are relaxing. When these feel completely relaxed, he's to think of the muscles of the trunk, telling them to relax, then the arms, and

SIN-RN03

no time for headaches...

For sinus or frontal headache, Sinutab is a preferred medication with physicians and nurses, for themselves and for their patients. Specifically formulated to relieve headache, Sinutab safely and promptly aborts the pain, decongests to relieve the pressure and promotes comfort and relaxation by mild tranquilizing action.

DOSAGE: *Adults*—two tablets at the first sign of headache, followed by one tablet every four hours. Do not exceed six tablets in 24 hours unless under a physician's orders. *Children* (6 to 12 years)—one-half the adult dosage. Sinutab, in bottles of 30, is available without prescription.

Each tablet contains: N-acetyl-para-aminophenol, 150 mg.; acetophenetidin, 150 mg.; phenylpropanolamine HCl, 25 mg.; phenyltoloxamine dihydrogen citrate, 22 mg.

Sinutab®
promptly resolves sinus or frontal headache

... Sleep

finally the neck and face. This, it's said, often helps produce sleep because it's repetitive and distracts the patient's mind from worrisome thoughts.

Encouraging the patient to follow a regular bedtime ritual (such as, for a woman, putting up her hair) also helps distract the patient. Some researchers found that when they denied subjects their usual bedtime routine, the subjects had greater difficulty going to sleep.

Finally, reassure your patient by dispelling any misconceptions he may have about sleep. Tell him there's evidence to support each of the following points:

1. Taking a nap does *not* necessarily make it more difficult to get a full night's sleep.
2. Eight hours' sleep nightly is *not* essential to health. In fact, no standard number of hours is best for everyone. Most people are thought to average about seven hours' sleep a night; but many get along on a good deal less. (It's said that England's Alfred the Great started the eight-hour myth when he decided his subjects should have eight hours each of work, recreation, and sleep.)
3. Everyone does *not* need

one long period of sleep every twenty-four hours. For some people, several short sessions are better.

4. One hour's sleep before midnight is *not* as beneficial as two after midnight. (This myth has been traced back to Henry Fielding, an eighteenth-century novelist.)

The sleep habits of Thomas A. Edison seem to bear out three of the above points. He's said to have slept as little as two hours in twenty-four, yet showed no ill effects. Visitors to Mr. Edison's labs would find the Wizard of Menlo Park stretched out on the floor, fast asleep at various times of the day or night. Mr. Edison, it seems, just lay down where he was whenever he got tired.

One other point: The action of soporifics and hypnotics is *not* a substitute for natural sleep. So when your patient can't sleep, don't turn first to the medicine cabinet, or the order sheet, or the telephone. It's just possible that by trying one or more of the methods described here you may be able to help him go to sleep naturally.

Naturally, too, you won't wake him to find out if your method worked!

The narcotic analgesics

Continued from page 51

choice for patients with pulmonary disease, including asthma. It's thought less likely than morphine to cause respiratory depression or to constrict the bronchioles and set off asthmatic attacks.

Even better than Demerol for obstetric pain is its chemical cousin alphaprodine (Nisentil). When injected under the skin or into a vein during the first stage of labor, this drug promptly relieves birth pangs in most women. Like the other narcotics, it may depress the baby's breathing. But its action wears off fairly fast. So it's useful for a variety of brief but painful procedures—for example, bonesetting and cystoscopy.

The dangers of respiratory depression have been further reduced by the discovery of two nonnarcotic agents that help control narcotic overdoses. These antagonists, levallorphan (Lorfan) and nalorphine (Nalline), have a remarkably rapid antidotal action that's specific against

narcotic depression. (They're ineffective against overdoses of barbiturates or alcohol or anesthetics.)

When a doctor has given narcotics to a patient in labor, he may inject Lorfan five minutes or so before delivery. This usually prevents any respiratory depression in the baby. Or, he may wait until the baby is born and then inject a minute amount of Lorfan into the umbilical cord.

Surgeons sometimes give Lorfan or Nalline along with pre- and post-operative analgesics. This allows them to administer much larger doses with relative safety for the patient. They may also use Lorfan when giving Demerol as an anesthetic supplement, to prevent Demerol-induced respiratory depression.

Another class of nonnarcotic agents, the phenothiazine-type tranquilizers, is also proving helpful. For instance, the product Mepergan, which contains both promethazine and meperidine, is claimed to have twice the pain-killing power of meperidine.

These tranquilizers are non-addicting. They seem to block off very few pain impulses. Yet, like the addicting narcotics, they somehow make the patient feel

HELENA RUBINSTEIN[®], INC.

CLINICAL RESEARCH DIVISION

NEW CLINICAL EVIDENCE THAT THE TOPICAL HORMONE APPROACH TO THE AGING SKIN PROBLEM IS A SAFE APPROACH:

IN A RECENT STUDY¹

...a hormone cream* containing 10,000 I.U. estrogen and 5 mg. progesterone per ounce was again clinically tested on a group of 100 menopausal patients.

THE CREAM WAS USED CONTINUALLY EACH NIGHT

...for almost two years in twice the dosage recommended. "Before" and "after" examinations revealed no signs of adverse systemic reaction, untoward vaginal or cervical changes, abnormal cytology, or endometrial bleeding.

THE INVESTIGATOR CONCLUDED

"...there is no danger of using the...cream if it is used daily and as directed by the manufacturer...."¹

CONCURRENCE WITH CLINICAL CONSENSUS

Thus, once again, "It is the consensus of opinion among experienced observers that cosmetic hormone creams with a maximum potency of 10,000 I.U. per ounce... if used in the manner recommended by the informed manufacturer are free from systemic effects."²

"Most estrogen creams currently available do not contain more than 10,000 I.U. of estrogen per ounce. When...used according to directions, they appear to be free of any abnormal systemic effects."³

calm and detached. They also have an anti-emetic action that helps prevent post-op vomiting. Chlorpromazine (Thorazine)

seems especially useful for this.

The potentiating action of these tranquilizers is useful in still another way. Some doctors

How to improve your nursing notes

Would you ever write that one patient is "more alert," that another is "gaining strength"? Let's hope not. For such expressions are entirely too vague.

Exact words are needed to carry exact meanings. So you'll want to tell briefly just *what* the two patients *did* that *showed* alertness and strength.

In the first case, for instance, you might write: "Asked for his family by name." This would be more to the point—and it might help social service too. In the second case, you might write: "Insisted on feeding himself." This would not only be more exact; it might also tell the doctor that the patient was ready for a change in treatment.

Weak generalities often crop up when a nurse fails to record her notes while details are fresh in her mind. So *prompt* note-making also is important.

How far should you go in describing a patient's appearance, actions, and reactions? Concentrate on the *meaningful* details. For example, if it's significant that a child ate the sandwich he requested, write that he did, then stop. Don't ramble on about the crust he left!

Another point: Even keen observations are useless if no one can read them. Nurses' notes are no place for sloppy scrawling, strike-overs, unfathomable abbreviations. Your experience and skill go for nothing if your notes don't get through to others.

END

**PEPTO-BISMOL RELIEVES
DIGESTIVE UPSET,
ABDOMINAL CRAMPS—
CHECKS COMMON
DIARRHEA
WITHOUT CAUSING
CONSTIPATION!**

Many RN's keep Pepto-Bismol in their own medicine cabinet to have it on hand when needed: to "calm" upset stomach, relieve gas pains, nausea, g.i. irritation, common diarrhea. Pepto-Bismol protects intestinal mucosa with soothing coating action. Safe for children and geriatric patients.

PEPTO-BISMOL® A Product of Norwich Research

Active ingredients: Bismuth Subsalicylate, Salol and Zinc Phenolsulphonate in a demulcent base. Contains no sugar. Note: Bismuth salts may darken stools temporarily.

... Narcotic analgesics

administer a tranquilizer and a narcotic simultaneously. This lets them reduce the size of the narcotic doses. With smaller doses, narcotic tolerance and addiction are delayed.

Of course, no drugs can substitute for the skill of doctors and nurses in preventing the addiction of patients who suffer chronic pain. The doctor continues to start the patient on the least-addicting analgesics, such as codeine and dihydrocodeine, and turns to more potent agents only as needed. He gives the smallest doses possible. And he gives them at irregular intervals, since this seems to delay addiction. He may even test the patient's response to a placebo. (Studies have shown that placebos sometimes relieve severe pain dramat-

ically, presumably through the power of suggestion.)

The skilled nurse makes use of the same emotional and psychologic factors that sometimes turn a placebo into a pain-fighting weapon. She helps cheer the patient with friendly, sympathetic words. She eases his mind by explaining procedures and what to expect next. She makes him physically comfortable. All these help ease pain and may reduce his need for narcotics.

Of course, for the terminal patient, preventing addiction isn't usually a consideration. The easing of pain is the patient's major need. So doctors may give a new synthetic narcotic called dextromoramide tartrate (Palfium). Administered by mouth in suitably spaced doses, it's said to be

Not for transfusion purposes

Sometimes when a pediatric patient refuses an item of food, we put the child's name on it and save it in the refrigerator.

One night a young mother went to the refrigerator to get her daughter some ice cream. She opened the door, gasped, called for me, and pointed in horror. There on the shelf was a tall, frosty glass of tomato juice labeled *Youngblood*.

I'm not sure I ever convinced her that "Youngblood" was a child's last name!

—DIANA WILKEMEYER, R.N.

“...until you get the Gelusil the doctor prescribed.”

The patient appreciates receiving an initial supply of Gelusil before leaving the doctor's office — for her it means immediate relief from heartburn without having to wait until she can get to the drugstore for a supply of Gelusil tablets or liquid. Gelusil

provides prompt and lasting relief from gastric distress—it neutralizes and adsorbs excess acid, protectively coats the gastric mucosa with two long-lasting demulcent gels. And Gelusil contains neither constipating nor laxative agents.

GELUSIL®
the physician's antacid

...Narcotic analgesics

as effective as giving injections of the older drugs.

Some authorities say it's impossible to develop an analgesic that would be potent and also nonaddicting. But progress has been made. Several new nonnarcotic analgesics claimed as effective as codeine have recently been marketed.

Two of these are dextro propoxyphene (Darvon) and ethoheptazine (Zactane), a nonaddicting relative of Demerol. They can be used alone or in combination with aspirin and phenacetin for the relief of headaches,

dental pain, dysmenorrhea, and muscle spasm. Two others, carisoprodal (Soma, Rela) and phenyramidol (Analexin), are claimed especially effective for relieving muscular pain. All four are said to be nearly free of undesirable side effects.

Doctors' reports on these newcomers have raised hopes that still more potent nonaddicting agents may be discovered. If drugs as effective as morphine and Demerol, yet free of their depressant properties, can be developed, we'll at last be close to the ideal analgesic. END

Delicately-flavored Aspergum gives immediate and effective topical analgesia in the oropharyngeal area. Chewing increases salivation and allays throat stiffness. A welcome medication in throat irritations and especially after tonsillectomy.

A PREPARED FORMULA THAT ASSURES NUTRITIONAL UNIFORMITY

NEW MODILAC

No chance of error. Modilac—the new formula with true milk flavor and color—overcomes the possibility of inaccurate home measuring. Nothing to add except boiled water. Economical, too—costs just a penny or two more (in some cases less) than home-prepared formulas.

Modilac does not simulate breast milk but it does provide nourishment comparable to that received by the infant who is successfully breast fed.

Modilac is modified to meet infant needs. The combined carbohydrates are absorbed throughout the digestive process, maintaining uniform blood sugar levels. Corn oil (which provides ample linoleic acid) replaces butterfat so intake of saturated fatty acids is reduced. Supplemented with vitamin C and other needed vitamins.*

In normal (1:1) feeding dilution, Modilac provides 2.03% milk protein, constituting 13% of the caloric value. Nutritionally, this coincides with authoritative† recommendations for infants on "artificial" formulas.

on duty... Tetrazets®

For prompt, pleasant relief of minor sore throat

TETRAZETS combine, in one raspberry-flavored troche, the anti-infective activity of three proved antibiotics (zinc bacitracin, tyrothricin, and neomycin), plus the topical anesthetic effects of benzocaine. TETRAZETS act longer than gargles or mouthwashes...provide wide-spectrum antibacterial action to help eliminate many pathogens in the mouth and throat. Soothing, pleasant-tasting TETRAZETS are available without prescription at local pharmacies. Keep TETRAZETS handy for that next sore throat.

MERCK SHARP & DOHME
Division of Merck & Co., Inc., West Point, Pa.

DIAPER RASH?...

*Your gentle hints can
save 'your' babies from it!*

As you know, diaper rash is most often caused by ammonia-forming bacteria in urine. Dennison Diaper Liners with Puracol* effectively inhibit this bacterial growth. Result, less ammonia, far fewer diaper rashes.

Soft, protective shields... day and night!

Dennison Diaper Liners are effective even against persistent, severe rashes. Tell Mother to insert in regular cloth diapers at every change. When baby wets, Puracol reacts, attacks the bacteria. At changing time mother flushes away everything, Liner and all. It's that simple... and dainty, too!

For a generous supply of professional samples, write Dennison, Dept. P278, Framingham, Mass.

NURSES: For new 75 bed general non-profit

Tassette fits automatically at the introitus. Not a diaphragm, Tassette insures that the mucosa of the entire vagina and cervix is bathed with medication.

Tassette is made of soft rubber and molds itself in conformity with body movements for complete comfort and safety.

Tassette

For internal menstrual control

The principle of internal menstrual control is now accepted by the medical profession.¹ With modern, effective Tassette there is no odor, no leakage or staining as with tampons, and the chafing, irritation and infection encountered with napkins does not occur. Tassette yields readily to all body movements and is worn by all ages with complete freedom, security and comfort.

Tassette is made of soft, pliable rubber and fits well below the cervix at the introitus, sealing off and catching the flow completely. It is easily folded, inserted or removed, and no pins or belts are required. Tassette can be inserted prior to menses, thus avoiding any embarrassment caused by the appearance of flow while at work or under other circumstances.

Tassette is also used by gynecologists as an adjunct in the treatment of vaginal and cervical disorders to insure the retention and availability of medication.² There is no loss from leakage, and the cervical and vaginal mucosa are continually bathed with the medication, thereby assuring maximum effectiveness. Tassette is also useful for collection of vaginal secretions in diagnostic procedures.³ A modification of Tassette is used in the management of vesicovaginal fistula.⁴

A STANDBY® NEARBY CAN LIGHTEN YOUR WORK A LITTLE

When close surveillance of vital signs is essential, a Standby Model Baumanometer placed at the patient's bedside can save you countless steps in the course of a busy shift. Lightweight and conveniently portable, it requires no setting up—it's always ready for immediate service.

You'll find the Standby the easiest-reading sphygmomanometer you've ever used. The exclusive inclined Exactilt scale can be read clearly from any angle, whether you're seated or standing. Scale numerals are big and bold, indelibly etched on an eye-saving, no-glare surface. And a special damping system makes it simple to correlate mercury-column oscillations with stethoscope sounds for accurate measurement.

Of course, the Standby carries the same perpetual guarantee for accuracy as all the other world-famous Baumanometer instruments.

TODAY'S CHALLENGE

Early detection, prompt, proper treatment and a greater public awareness of cancer have raised the life-saving rate, in the past ten years, from 1 in 4 to 1 in 3.

But with present knowledge, it is possible today to save 1 in 2 cancer patients. Our two integrated programs are helping to meet this challenge.

We make available to doctors a variety of free materials... magazines... films... exhibits... slides... on latest advances in cancer therapy.

We use every effective means of communication to urge all Americans to see their doctors promptly at the first sign of a danger signal, and to have annual health checkups no matter how well they may feel.

Saving the lives of 1 in 2 Americans stricken by cancer... that is today's challenge. Tomorrow's challenge is even now being met in the research laboratories.

READ WHY THIS IS TODAY'S MOST ADVANCED SURGICAL ADHESIVE TAPE

Here is a dramatically new and different surgical adhesive tape. We urge you to try it. Quite possibly it is the tape you will wish to use in your practice and recommend to your patients from now on.

Three years under development in the Medical Research Laboratories of 3M Company, now proved in extensive clinical trial,¹ this new tape has physical properties completely different from those of any other existing surgical adhesive. It offers equally unprecedented advantages in use.

PROPERTY: tissue-thin microporous backing and adhesive—the first truly nonocclusive tape. **ADVANTAGE:** prevents maceration and mechanical irritation. Cool, lightweight, comfortable. Easy to tear, handle, apply.

PROPERTY: new, physiologically inert synthetic

components—contains no natural rubbers or resins. **ADVANTAGE:** nonirritating, virtually eliminates traditional problems of chemical irritation even in markedly tape-sensitive patients.

PROPERTY: thin, non-creeping copolymer adhesive does not entrap hairs, yet outholds previous tapes. **ADVANTAGE:** easily removed without painful depilation. Sticks even in baths. Requires fewer changes.

Available through your surgical supply dealer or pharmacy in usual widths, $\frac{1}{2}$ " to 3", 10 yard rolls. To receive a trial sample, write to 3M Company, St. Paul 6, Minnesota.

Convenient and Effective ANTACID

For Patients Away From Home

BiSoDol Mints afford patients who work or are away from home—easily accessible yet prompt and effective relief from gastric hyperacidity. BiSoDol Mints soothe irritated mucosa and exert prolonged diminution of gastric acidity without side effects. No risk of constipation, acid rebound or alkalosis. BiSoDol Mints help restore the normal pH in the stomach. A most convenient, non-systemic antacid. Free from sodium ion.

COMPOSITION:

Magnesium Trisilicate, Calcium Carbonate, Magnesium Hydroxide, Peppermint.

INT & A

**"PREMARIN"
INTRAVENOUS**

the physiologic hemostat

**CONTROLS
BLEEDING
PROMPTLY
& SAFELY**

1-3

In a typical series of 625 patients undergoing tonsillectomy and adenoidectomy, "PREMARIN" INTRAVENOUS helped to reduce the incidence of postoperative hemorrhage from an average of 5 per cent to zero.² "PREMARIN" INTRAVENOUS has also been used effectively to control postoperative hemorrhage, to help minimize blood loss during surgery, and to arrest epistaxis and other types of spontaneous bleeding.³

Over 1,000,000 injections have been given to date without a single report of toxicity.

"PREMARIN" INTRAVENOUS (conjugated estrogens, equine) is supplied in packages containing one "Secule" providing 20 mg., and one 5 cc. vial sterile diluent with 0.5% phenol U.S.P. (Dosage may be administered intramuscularly to small children.)
